

# Creep of melter crowns

© SCHOTT AG, Christian Kunert, 19.09.2022

# Creep measurement and prediction on running tanks

- Sensors are installed on every belt of the crown
- Crown movement is registered automatically
- After approx. 6-12 months of data collection prediction is possible, provided the process and tank parameter (especially insulation, process temperature) remain stable

# Creep measurement and prediction on running tanks

- Example for over-insulation during the campaign
